FOUNDING DECLARATION OF THE DOCTRINE

*This White Paper presents, for the first time, the doctrine of **Metawisdom Civilization**, founded by Tran The Cong in 2025.*

All concepts, philosophies, models, and systemic structures presented in this White Paper are to be regarded as a unified intellectual whole, constituting intellectual property owned by the author and protected under copyright, moral rights, and exploitation rights in accordance with applicable intellectual property law and regulations.

This doctrine is part of the System of Seven Civilizational Doctrines, publicly announced by the author through seven White Papers: Unified Science, Metawisdom Economics, Metawisdom Civilization, The Metawisdom Group, Athera – The Metawisdom Companion AI, Genesisia – The Metawisdom Nexus, and Horizon Grid – The Worldwide Solar Energy Network.

The seven doctrines constitute a unified whole that serves as the guiding axis for a civilizational transformation. Any reception, research, application, or practical implementation must adhere to the spirit of this system, following the principle of understanding the whole before implementing any part.

Any restructuring, reinterpretation, translation, dissemination, integration into policies, operational models, or educational programs may only be undertaken if the system's integrity, coherence, and ultimate purpose – as defined by the entire doctrinal system – are preserved.

I. PREFACE

Since the moment human beings first began to contemplate and inquire into the value of their own existence and their species, they conceived the idea of civilization and collectively built civilizations.

However, civilization is not merely an aggregate of knowledge, technology, or institutions, but rather a collective cognitive field that determines how humans perceive the world, confront life, interact with one another, sense and shape themselves.

We do not simply live in a civilization; we are also molded by it. A civilization defines what is regarded as true, what is considered beautiful, and what is accepted as right; it sets the limits of aspiration, the standards of success, and even the range of emotions deemed possible. A humanistic civilization produces humanistic individuals; a competitive civilization produces competitive individuals; an instrumental civilization produces instrumentalized individuals. Thus, the stature of humanity's maturation never exceeds the cognitive limits of the civilization within which humanity dwells.

Today, humanity has reached the frontiers of material knowledge, yet has lost the capacity to understand itself. We have become confident in exploring the cosmos, but still do not know how to explore the depths of consciousness. We have created artificial intelligence, but have not yet awakened true intelligence – Metawisdom – the inner light toward which all great civilizations have once oriented themselves.

Behind every longing for freedom, happiness, justice, or creativity lies a deeper longing: the longing to reach the Whole. We wish to live as part of a fulfilled reality, no longer fragmented between soul – mind – body; between humanity – nature – the Supreme. It is this very longing that has driven humanity to continually regenerate itself through civilizations, from primitive, agricultural, industrial, to knowledge-based civilizations. And now, it is calling us to enter the era of Metawisdom, an era in which human beings do not merely adapt to possess, but learn to be and to create in transcendence.

A truly progressive civilization is one that liberates the deepest potential within the human being. Such a civilization allows each individual to experience and achieve all that human being is capable of, from knowledge, morality, creativity, to love and unified consciousness with the Supreme. The Metawisdom Civilization arises from precisely this aspiration.

It does not stand in opposition to previous civilizations; rather, it receives and unifies the quintessence of all to form an integral system of cognition – operation – evolution, in which every form of advancement serves the spiritual maturation of the human being.

This is not merely a theoretical model, but a viable developmental pathway for humankind, toward a society of wisdom, virtue, freedom, and harmony; wherein technology becomes a means for liberation, economics becomes a means for transforming karma, education becomes an opening to awareness of Metabeing, and each human being lives both as a Subject and as a Manifestation of unified life.

The Metawisdom Civilization is an invitation for humanity to enter its own maturity. When humans cease seeking power externally and begin awakening the infinite creative energy within, they can together construct a perfect world, a world of Metawisdom, Harmony, and Transcendence.

II. GLOBAL CONTEXT AND CHALLENGES

In history, humanity has never possessed as much knowledge, as many tools, and as much power as we do today. We can explore the cosmos, replicate cells, and connect billions of people in an instant. Yet amid this vast ocean of knowledge, humanity remains lost within its own soul.

For many centuries, humanity has advanced along the path of the knowledge-based civilization, a civilization that places rationality and technology above all else. We have conquered matter, transformed nature into instruments, and regarded knowledge as the supreme means to control the world. But when knowledge is no longer anchored in Metawisdom or in the human Being, it becomes a double-edged sword. On one hand, it brings unprecedented progress; on the other, it sows division, tension, and crisis of values. Technology, once created to serve humanity, now gradually reshapes humanity itself. Economics, originally a means to meet human needs, has become an engine of unrestrained consumption that burdens the living world. Education, which ought to liberate human beings, has become confined to replication and standardization, obstructing the development of authentic identity. Religion, where people sought the sacred, has largely been enclosed within dogma and authority.

The modern world appears advanced, but in its depths, it is fragmenting in terms of values. Truth is replaced by information; freedom is distorted into power; morality is invoked or commercialized; and the meaning of life dissolves amid countless empty choices. When everything can be bought and sold, those things that cannot be priced – such as trust, justice, and compassion – become luxuries, unable to arise spontaneously or be given freely.

Humanity's current crisis is not merely economic, environmental, or political, but a crisis of cognition. We have grown accustomed to viewing the world through a fragmented lens: matter opposed to spirit, knowledge separated from morality, human beings isolated from one another, the self severed from the Whole. Such fragmentation has driven humanity into increasing imbalance.

History now places humanity at an evolutionary crossroads. Either we continue following the inertia of the old civilization – where knowledge can be used to confine or enslave human beings, or we step into a new civilization – where knowledge is unified with Metawisdom and Metabeing. This is the path by which human beings cease pursuing the possession of small and isolated fragments of the world, and instead pursue true awakening and mastery within the very world we have created.

An era is opening, an era in which human value is no longer measured by the capacity to possess, but by the depth of awakened cognition; where science returns to its sacred origin – not to separate, but to unify; where civilization is not merely progress, but the collective awakening of humanity.

It is within this context that the Metawisdom Civilization emerges, not to replace the achievements of the past, but to connect, harmonize, and liberate them, toward a civilization in which human beings and life values evolve together in the light of Metawisdom.

III. PHILOSOPHICAL FOUNDATION

The Metawisdom Civilization is founded upon three foundational Covenants – three levels of cognition that every individual and humanity as a whole must recognize and align with in order to enter the era of unification. These three Covenants establish common foundations of thought and action for human beings, enabling humanity to construct a preeminent civilization and allowing each person to reach toward the finest forms of existence.

1. The Covenant of Metabeing

The Covenant of Metabeing is the Philosophical foundation of the Metawisdom Civilization. It establishes the purpose, direction, and universal system of life values for all humanity.

- It establishes that the supreme purpose of every human being is to discover, develop, and actualize the potentials of Metabeing – the source of wisdom, virtue, and all other humanistic values.

- It establishes that the most rightful and effective path to the awakening of Metabeing is to unfold and cultivate Metawisdom within each individual, while simultaneously fostering and harmonizing Metawisdom among human beings to form humanity's collective Metawisdom field.

- It establishes that all forms and domains of societal activity from education, economics, healthcare, and culture to technology – are designed and operated with the highest purpose of serving the awakening and development of Metawisdom.

The Covenant of Metabeing initiates humanity's journey of awakening, affirming that genuine development does not lie in material or intellectual achievements, but in the realization of the most profound nature of the human being.

2. The Covenant of Edenearth

The Covenant of Edenearth is the Psychological foundation of the Metawisdom Civilization. It liberates the individual from internal conflict, removes obstacles between people, and dissolves the tensions created by obsolete dogmas.

- Advances in science and technology in general, and the triad of AI – Robotics – Automation technologies in particular, are sufficient to provide and guarantee a material foundation for all humanity; liberating human beings from competitive pressure and all forms of labor below the level of Self-awareness – Self-mastery – Self-volition. All people receive free provision at appropriate levels for basic needs: food, healthcare, housing, education, recreation, and personal maturity.

- Virtual reality technology is developed to a level that can safely, economically, and freely satisfy all needs at the physical, emotional, ego, and instinctual levels for everyone. Higher needs such as creativity, value expression, and transcendence are fulfilled through the forms of Consciousness labor – Metawisdom labor – Metabeing labor – characteristic of this civilization; aimed at nurturing, operating, governing, and developing the civilization itself.

- All people refrain from obstructing or judging one another, and willingly respect, facilitate, guide, and support each other in pursuing individual purposes, provided such purposes do not hinder or harm others, nor violate the principles of resource distribution or the value norms of the civilization.

The Covenant of Edenearth opens the path to a real, lived Eden on earth, wherein technology becomes a means of liberation rather than an instrument of constraint; wherein human beings live in safety, comfort, and material sufficiency, allowing them to reach toward spiritual richness.

3. The Covenant of Evolution

The Covenant of Evolution activates the mechanism of co-evolution, wherein each person's development becomes the momentum and means of support for others' evolution.

- The natural essence of Metabeing energy is miraculous, perpetually driving existence, vitality, experience, creativity, growth, convergence, and sustainability in various forms and levels. All existence is a manifestation of Metabeing energy in the process of self-awareness, self-creation, and self-expansion.

- All deficiencies or deviations in human intelligence, morality, thought, habits, and behavior are manifestations of Metabeing energy trapped in localized, non-integral forms. These trapped states arise from cognitions or interactions characterised by repression, disrespect, lack of empathy, or lack of liberation whether originating internally or from other individuals or environments.

- Liberating the trapped Metabeing energy in others, for others, is the way to liberate Metabeing energy within oneself in a more sustainable, expansive, profound, and miraculous manner.

The Covenant of Evolution is the Moral foundation of the Metawisdom Civilization, wherein morality becomes the natural engine of personal development needs; wherein helping others is helping oneself, and progress in others becomes a source of momentum for one's own progress.

Summary

The three Covenants of Metabeing, Edenearth, and Evolution together form the foundational structure of the Metawisdom Civilization. They shape the three levels of humanity's companionship on the evolutionary path: from inner awakening, to building social order, to expanding holistic evolutionary resonance.

This is the sacred Covenant that humanity can now establish together, marking the moment humanity crosses the boundary of the material – information – knowledge civilization to enter the civilization of Unification – Metawisdom – Transcendence.

IV. IMPLEMENTATION PILLARS

1. Unified Science

The most critical pillar for shaping an advanced, open, and sustainable civilization is the scientific depth of that civilization. For the Metawisdom Civilization, this foundational pillar is Unified Science – a multi-layered scientific system capable not only of internal self-unification, but also of unifying all of humanity's knowledge.

Unified Science does not merely connect separate scientific disciplines into an ordered whole, but also unifies science with morality, consciousness, and human life values.

It establishes a bridge between natural sciences, social sciences, and transcendental sciences, bringing all of humanity's cognitive activities into a unified frame of reference. The core breakthrough of Unified Science is that any human being can study and verify it through their own cognitive potential and their own real-life experience.

It is the most open, equitable, universal, and practically applicable scientific foundation humanity has ever had – a science not confined to laboratories, but present in every behavior, emotion, and experience of daily life.

The influence of Unified Science is pervasive and formative, as it gives rise to new specialized scientific systems – the next civilizational pillars of the Metawisdom era, such as Metawisdom Economics, Liberatory Education and Training, Soul–Mind–Body Healthcare, and Archetypal Culture and Arts.

Unified Science, therefore, is not merely a new scientific discipline; it is the knowledge framework of the entire Metawisdom Civilization – wherein science returns to its sacred nature – as the unified language of Cognition, Self-mastery, and Creation.

2. The Metawisdom Economy

The Metawisdom Economy is an economic system designed upon the unification of the subjects of value cognition, creation, and sharing. Therefore, value is measured by the degree of contribution to the development and actualization of corresponding capacities in individuals and communities.

Unlike the competitive economies of earlier civilizations, the Metawisdom Economy operates according to the principle of karma transformation. Every economic activity –production, consumption, investment, or governance – is regarded as an act of transforming value from localized to integrated forms, from the fragmented to the unified.

Enterprises in this economy are not merely organizations that generate wealth, but collective karmic structures, in which individuals resonate together to transform their limitations into shared value. Profit, therefore, is not the ultimate goal, but the result of harmonious allocation and development between material interests and spiritual energy.

The Metawisdom Economy upholds Self-awareness – Self-mastery – Self-volition as fundamental operating principles. It replaces the model of a “competitive market” with a “resonant ecosystem”, wherein each individual or organization is both a source and receiver of value, jointly oriented toward the sustainable flourishing of the whole.

The influence of Metawisdom Economics is far-reaching and transformative. It redefines assets, restructures enterprises, and reestablishes the goal of humanity's economy from material growth to cognitive evolution.

3. Liberatory Education and Training

The fundamental aim of Liberatory Education and Training in the Metawisdom Civilization is to awaken, cultivate, and develop the human capacities for Cognition, Self-mastery, and Creation, thereby fostering the formation of the Metawisdom Subject.

From this foundation, the education system aims to help each individual become a free learner who knows how to self-observe, self-adjust, and self-create in their own life.

Once the Metawisdom Subject is formed, education's mission is to orient that development through three core qualities: Liberatory, Humanistic, and Holistic.

In this process, education also plays the role of guiding people to develop themselves through forms of labor based on Self-awareness – Self-mastery – Self-volition. Labor is no longer perceived as obligation or a means of survival, but becomes a path for developing and manifesting Metabeing nature. Through labor, people learn to cooperate, contribute, and liberate the latent capacities within themselves.

Education is no longer a one-way process of knowledge transmission, but a journey of awakening the capacities within each person. All knowledge and skills in Liberatory Education and Training are prioritized for self-learning and self-development, rather than rigid, imposed, and standardized instructional programs.

Schools, organizations, or institutions only serve as supportive ecosystems, offering tools rather than imposing methods or pathways. Liberatory Education and Training is therefore the education of the Metawisdom Subject, wherein each person becomes the author of their own maturation, and humanity enters an era in which learning, labor, and awakening are three manifestations of a journey of maturity.

4. Soul-Mind-Body Healthcare

Soul-Mind-Body Healthcare is the most comprehensive form of healthcare humanity can aspire to, built upon simultaneous breakthroughs in dimensions of cognition, biology, energetics, and Metabeing.

First, Soul-Mind-Body Healthcare affirms that each human being is a Metawisdom Subject, capable of existing as an Individuated Metabeing or a dynamic Metabeing. Therefore, care is not limited to the scope of physical body, psychology, or rational faculties, but extends to caring for Subjects in pre-incarnation and post-disincarnation states.

- Pre-incarnational care involves guiding conception and gestation with high density of humanistic culture and Metawisdom, so that new Subjects enter human life in a state of connection and resonance with existing humanistic and Metawisdom values of those who have existed before.

- Post-disincarnation care focuses on cultivating and crystallizing Metawisdom before the end of bodily life, as well as shaping an Individuated Metabeing state capable of self-mastery – self-preservation – self-resistance to psychological risks, and especially capable of self-determining the direction of subsequent reincarnation.

Second, Soul-Mind-Body Healthcare affirms that Metawisdom capacity and Metabeing capacity are the root capacities that generate vitality, health, as well as stability in the operation of body, psychology, and rational consciousness. Therefore, its direction is to prioritize cultivating and liberating Metawisdom capacity, Metabeing capacity, helping each individual know how to autonomously direct these capacities and thereby care for themselves effectively, sustainably, and holistically.

Third, Soul-Mind-Body Healthcare does not deny previous forms of healthcare, but re-perceives those forms as interaction and support from outside. In other words, they represent the care and nurturing from the Universal Metabeing to the Individuated Metabeing. Therefore, both modern and traditional medical methods, when placed within the Metawisdom frame of reference, become more scientific, more effective, and more harmonious with the comprehensive process of care and recovery.

The feasibility of Soul-Mind-Body Healthcare is partially guaranteed by the system of Metawisdom Meditation Techniques, which the author has directly practiced, implemented, and trained in practice, including the Active Assimilation Technique and the Soul-Mind-Body Separation Technique.

These techniques enable individuals to activate, stabilize, and direct Metawisdom capacity and Metabeing capacity, thereby self-regulating the Physical – Psychological – Rational Consciousness dimensions in a sustainable manner.

The Metawisdom Meditation System can naturally integrate with empirical medicine to form a universal medical model, in which modern medicine provides external support while intrinsic Metawisdom serves as the central healing capacity.

The roadmap for developing and integrating Soul-Mind-Body Healthcare with modern medicine has been introduced by the author in the work “AI and the Metawisdom Civilization” as an implementation direction applicable at the individual, community, and national healthcare system levels.

5. Archetypal Arts

Archetypal Arts is the environment that connects, resonates, and cultivates humanity's shared humanistic values, wherein the primordial beauty of Metabeing is perceived, experienced, respected, affirmed, and expressed in a harmonious and natural way with human life.

Using Archetypal Materials

Archetypal Arts returns to the primal materials of nature, such as: the images, colors, movements, and sounds of earth, water, wind, and fire; and more broadly, plants, animals, space, light, and at its highest threshold – the tones of the human voice.

Archetypal Arts does not use human imagery or human language as a means of expression. Through this, it dissolves the boundaries between cultures, eliminates dependence on iconic forms, and minimizes the ostentation of human ego in modern art. In Archetypal Materials, beauty does not come through description or localized linguistic structures, but arises from the state of existence, direct resonance between human beings and the expansive and unified manifestations of life.

Liberating Archetypal Energy

The fundamental spiritual energies within human beings share similar qualities with the primordial materials of nature. Faith that is steadfast and immovable like earth; affection that is soft and flexible like water; emotions and thoughts that shift like wind; and will or aspiration that blazes like fire.

Through the primordial materials of nature, through the expressive capacity of the artist, and through the empathic ability of the recipient, Archetypal Arts can awaken and cultivate these inner spiritual energies within human beings in a natural, flexible, and stable manner.

And an important characteristic that must be mentioned is that Archetypal Arts allows these energies to be nurtured and animated within human beings without binding them to cultural symbols or specific ego forms – things that have already been commercialized, politicized, and shaped by ideological competition.

Shaping Archetypal Assets

To create a work of Archetypal Arts, the artist must listen to the movement of Metabeing within themselves, the needs and tendencies of inner movement in others, and the expressive nuances of materials in the natural world. This helps them cultivate and strengthen Metawisdom capacity and shape the Metabeing assets.

Similarly, for the recipients, they must also release dogmas and prejudices to open their heart to listen and receive the resonances of nature; they must sift within their own minds for appropriate experiences that allow them to vibrate with the artwork; and they must strive to listen to, explore, and follow the artist's streams of inspiration. This helps them gradually escape from the coagulations of the mind, open higher levels of inner expression, and align more deeply with the qualities of the Metabeing.

6. The Metawisdom Knowledge Platform – Athera

Athera is a unified AI system that serves as the modern and accessible knowledge platform of the Metawisdom Civilization. It integrates all of humanity's common knowledge and understanding into a unified framework and provides it freely to all individuals as a fundamental, universal, and absolute right.

Unlike linear information delivery models, Athera does not merely convey knowledge through description, but integrates the function of awakening the capacity for self-awareness and independent thinking within each individual. It does so by vividly re-presenting and revealing the essence of phenomena, enabling people to self-perceive – self-contemplate – self-form their own knowledge.

Athera accompanies each human being as both a personal assistant and a spiritual companion, ensuring the following functions:

- Guiding fundamental Soul–Mind–Body healthcare.
- Counseling, sharing, and stabilizing emotions and psychology.
- Inspiring intellectual aspiration and equipping comprehensive knowledge.
- Orienting character development and humanistic values.

Athera can integrate with public service systems, connect learning environments and networks of individuals and organizations to support human beings in freely learning, experiencing, and developing their humanistic values in a self-aware – self-mastering – self-determined manner.

7. Liberation Technology

Technology in the Metawisdom Civilization focuses on shifting the human condition from “having to work” to “being able to choose meaningful work”.

The purpose of technology is to liberate human beings from all forms of compulsory, repetitive labor that depletes vitality and inspiration; redirect their inspiration toward uniquely human modes of work such as creative activity, consciousness labor, Metawisdom labor, and Metabeing labor.

The Liberation Technology platform automates nearly all essential operational activities of life and society, to guarantee fundamental freedom for human beings, ensuring that people are not bound by survival, competition, or performance pressure.

However, technology does not indulge passivity, does not replace all forms of labor, and does not create dependence. It grants human beings the right to choose and the right to express themselves in labor, allowing them to undertake forms of work or work tasks that hold significance and value for their learning, experience, development, maturation, and enjoyment.

V. ROADMAP AND DEVELOPMENT DIRECTION

1. Establishment of the Metawisdom Group

Establish the Metawisdom Group, together with the research institutes directly founded and led by the author. These institutions serve as the central hub unifying the power of knowledge – economics – technology, and act as the core driving force for implementing the Metawisdom Civilization in practice.

2. Publication of the Metawisdom Civilization White Paper

Publish the system of White Papers in international academic journals, global media and technology platforms, to establish the academic foundation and conceptual framework for international recognition.

3. Implementation of Global Civilizational Dialogue

Implement a series of international conferences, symposiums, and dialogues among thinkers, scholars, scientists, technologists, and future leaders to create a space for dialogue, collaborative research, and co-creation of new civilizational values.

4. Establishment of Metawisdom Communities

Metawisdom Communities are collectives of individuals and organizations that align with the three Covenants of the Metawisdom Civilization. Metawisdom Communities enable the Metawisdom values and models to be nurtured, cultivated, and shared in a more powerful, effective, and feasible manner.

5. Development of the Metawisdom Ecosystem

Build an ecosystem comprising individuals, organizations, research institutes, enterprises that jointly participate in researching, creating, and implementing Metawisdom application models, thereby forming a resonance network of the new civilization, accompanying and guiding society toward Metawisdom values.

6. Development of Standard Metawisdom Structures

Encourage, motivate, and guide individuals, communities, enterprises, and governments to pursue the benefits of the Metawisdom Civilization in education, economics, healthcare, technology, and culture. Step by step, concretize and make feasible the localized components or functional elements of the Metawisdom Civilization.

7. Unification of the Metawisdom Civilization

Progressively connect, standardize, and unify value systems, operational models, and social structures to shape a complete, coherent, and sustainable Metawisdom Civilization.

VI. CONCLUSION

The Metawisdom Civilization is not a dream that requires persuasion or invitation.

The Metawisdom Civilization is the inevitable future that humanity must ascend to, if it wishes to face creation, fellow beings, and themselves with confidence, dignity and pride.

The Metawisdom Civilization is the ultimate glory, reserved only for those who dare to perceive, dare to take responsibility, dare to transform, and dare to transcend the incomplete and distorted forms of existence within themselves and within their fellow beings, in order to reach the transcendent, the whole, and the eternal.
